

Check in Reminder Automation

1. Overview

This solution implements a **fully automated onboarding follow-up system** using **Power Automate**. It ensures that employee check-in reminders at **30 days and 90 days** from the Date of Joining (DOJ) are sent **accurately, on time, and without manual effort**.

Process Automation

✓ Fully automated flow with zero manual triggering

Reduced Manual Effort

✓ HR no longer tracks onboarding follow-ups using Excel or reminders

Timely Follow-Up

✓ Date-driven logic based on actual calendar calculations

No Missed Check-Ins

✓ Daily evaluation ensures no milestone is skipped

Dynamic Routing

✓ Department-based email routing using a helper list

2. Requirements Status

Requirement	Status
Automated 1-month email	✓ Done
Automated 3-month email	✓ Done
Scheduled flow	✓ Done
No Delay / Delay Until	✓ Done
No duplicate emails	✓ Done
Consumption-safe	✓ Done
Dynamic department handling	✓ Done
Multiple supervisors support	✓ Done
Department-wise recipients	✓ Done
HR Head + Dept Head in CC	✓ Done
Future-proof recipient mapping	✓ Done
Null-safe CC logic	✓ Done
Scalable architecture	✓ Done

How Users Will Use the System (Automated Flow)

3. How the Automation Works

Flow Execution

- The flow runs **once daily at 7:00 AM (IST)**
- It evaluates all employee records each day
- There are **no long-running delays or timers**

30-Day Check Logic

The system checks:

- Has 30 days passed since DOJ?
- Has the 30-day email already been sent?

If **YES**:

- Sends a reminder email
- Updates SharePoint with a "30-day check completed" timestamp

90-Day Check Logic

The system checks:

- Has 90 days passed since DOJ?
- Has the 90-day email already been sent?

If **YES**:

- Sends a second reminder email
 - Updates SharePoint with a "90-day check completed" timestamp
-

4. Duplication Prevention

Duplicate emails are prevented using **SharePoint tracking fields**:

- **FirstCheck-In** → 30-day completion flag
- **SecondCheck-In** → 90-day completion flag

Once updated:

- The flow automatically skips that milestone in all future runs
- Daily execution does **not** mean daily emailing

5. Date Calculation Behavior (Important Clarification)

Power Automate performs **true calendar date arithmetic**, not manual date construction.

Example

- DOJ: **31 January**
- Expression: `addDays(DOJ, 30)`
- Result: **2 March** (no invalid dates like "31 February")

Invalid calendar dates are **never created**.

Key Understanding

logic is:

- ✓ **DOJ + 30 actual days**
- ✗ NOT "same date next month"

This approach is:

- Stable
 - Time zone-safe
 - Industry-standard for HR check-ins
-

6. How Users Interact with the System

HR Team

- Adds employee details once in SharePoint such as Name, DOJ, Dept
- The Workflow will Tracks 30-day and 90-day completion status
- No reminders, follow-ups, or manual effort required
- No daily monitoring required
- Configuration-driven management via SharePoint

Managers / Supervisors

- Automatically receive reminder emails
- Respond with feedback
- No system access required

7. Key Business Benefits

- ✓ Zero manual tracking
 - ✓ No missed onboarding milestones
 - ✓ Clear visibility for HR
 - ✓ Consistent supervisor engagement
 - ✓ Scales easily across departments
 - ✓ Low maintenance and high reliability
-
