

Automation Summary Report – Continuous Learning Review

1. Objective

To automate the identification and reporting of employees who have not completed mandatory training within the defined timeframe, and to notify respective supervisors for action.

2. Solution Overview

A **Power Automate workflow** has been developed that:

- Reads employee training data from an Excel file (OneDrive)
- Evaluates training status based on defined rules
- Sends automated email reports to supervisors
- Maintains a tracking flag to prevent duplicate emails/spam
- Automatically resets the system for future cycles

3. Key Logic

→ Email Trigger Condition

Emails are sent only when:

- Training is **not completed (Days = 0)** OR
- Training is **overdue (>100 days)**
- AND email has **not already been sent**
- AND employee is **eligible**

→ Duplicate Control

- Once email is sent → Mail_Sent = Yes

- Prevents repeated notifications for same case

→ Reset Logic

The system automatically resets when:

- Training is completed (Days between 1–100) OR
- Employee becomes Not Eligible
- Mail_Sent is cleared (blank)

4. Workflow Process

The automation runs daily and performs:

1. Fetch Data

- Reads all employee records from Excel

2. Filter Records

- Identifies employees requiring action

3. Group & Send Email

- Groups employees department-wise
- Sends email to respective supervisors
- Includes a clean formatted table (Name, Designation, Days_Cross)

4. Update Status

- Marks Mail_Sent = Yes after email delivery

5. Reset Records

- Clears Mail_Sent for non-applicable records
-

5.Email Output: The system sends a **professional formatted report** including:

- Business message aligned with client requirement
- Highlighted condition (60-day rule)
- Clean table with only relevant fields
- Center-aligned values for readability
- Additional notes for interpretation

6. Key Features

- Fully automated (no manual intervention)
- Prevents duplicate emails
- Self-maintaining (auto reset logic)
- Handles all data records (pagination enabled)
- Optimized performance (controlled concurrency)
- Clean and consistent data handling

7. Benefits

- Ensures timely tracking of training compliance
- Reduces manual effort and monitoring
- Improves visibility for supervisors
- Maintains accurate and up-to-date reporting
- Scalable and reliable for future use

8. Conclusion

The automation successfully delivers a **stable, efficient, and scalable solution** for tracking training compliance.

It ensures that:

- Relevant stakeholders receive timely updates
- Duplicate communication is avoided

- The system automatically resets and continues monitoring

FINAL STATEMENT

This solution is:

- Fully functional
- Business-aligned
- Efficient and reliable
- Ready for production use
