

# Employee Confirmation & Medical Insurance Enrolment Automation

---

## Overview

To streamline employee confirmation tracking and medical insurance enrolment, an automated solution has been implemented using **Microsoft Lists** and **Power Automate**.

The solution eliminates manual tracking, automates supervisor notifications, captures approval decisions, maintains an audit trail, and supports probation extensions through an automated re-approval process.

The workflow forms part of the broader employee lifecycle process and works alongside the existing **30-Day** and **90-Day Check-In** automations.

---

## Business Process

### 1. Expected Confirmation Date Calculation

For every employee on probation, the system automatically calculates:

|                                                         |
|---------------------------------------------------------|
| Expected Confirmation Date = Date of Joining + 180 Days |
|---------------------------------------------------------|

In case probation is extended, HR can update a:

|                           |
|---------------------------|
| Revised Confirmation Date |
|---------------------------|

The workflow always uses:

|                                                                                                                |
|----------------------------------------------------------------------------------------------------------------|
| If Revised Confirmation Date exists<br>Use Revised Confirmation Date<br>Else<br>Use Expected Confirmation Date |
|----------------------------------------------------------------------------------------------------------------|

This ensures the latest confirmation decision is always considered.

---

### 2. Monthly Review Cycle

The automation runs automatically on the **25th of every month**.

During execution, the system:

- Retrieves active probation employees.
- Calculates the effective confirmation date.

- Identifies employees whose confirmation falls in the upcoming review cycle.
  - Determines the relevant supervisor based on department.
  - Sends approval requests.
  - Records supervisor responses and updates the tracking list.
- 

### 3. Supervisor Approval Process

A centralized Department Mapping List stores:

- Department
- Supervisor Email Address

Based on the employee's department, the system automatically identifies and notifies the appropriate supervisor.

The approval notification contains:

- Employee Name
- Date of Joining
- Effective Confirmation Date
- Approval Options

Supervisor responses:

**Include** – Employee will be enrolled in medical insurance.

**Defer** – Employee confirmation is postponed and comments are captured.

---

### 4. Decision Handling

*Include*

When the supervisor selects **Include**:

- Insurance Decision = Include
- Decision Status = Completed
- Approver Name is captured
- Response Date is captured
- Employee becomes eligible for insurance enrolment

*Defer*

When the supervisor selects **Defer**:

- Insurance Decision = Defer
- Decision Status = Pending

- Supervisor comments are captured
- Approver Name is captured
- Response Date is captured

The case remains open until HR updates a Revised Confirmation Date or the employee is reviewed in a future cycle.

---

## 5. Additional Controls & Governance

### Employee Status Management

To avoid unnecessary approval requests, an **Employee Status** field has been introduced.

Available values:

- Active
- Resigned
- Terminated

The workflow processes only employees marked as **Active**.

If an employee resigns or is terminated before confirmation, HR can update the employee status accordingly. Once the status is changed to **Resigned** or **Terminated**, the employee is automatically excluded from future review cycles and no approval notification is sent to the supervisor.

---

## 6.Re-Approval for Confirmation Extensions

The solution supports multiple probation extensions.

Example

Initial Confirmation Date:

11-Jul-2026

Supervisor Response:

Defer

Reason: Confirmation extended by 2 months

HR Update:

Revised Confirmation Date = 11-Sep-2026

The employee is automatically picked up in the appropriate future review cycle without any manual follow-up.

---

## 7. Audit Trail

The tracking list maintains:

- Employee Name
- Date of Joining
- Expected Confirmation Date
- Revised Confirmation Date

- Insurance Decision
- Decision Status
- Approver Name
- Response Date
- Supervisor Remarks
- Employee Status

This provides complete visibility and traceability of all confirmation and insurance decisions.

---

## 8. Key Benefits

### Operational Benefits

- Eliminates manual follow-ups.
- Automates supervisor communication.
- Ensures timely confirmation reviews.
- Supports probation extensions automatically.
- Reduces HR administrative effort.

### 9. Governance Benefits

- Complete audit trail.
- Captures approver name and response date.
- Maintains supervisor comments.
- Improves compliance and reporting.

### 10. Business Benefits

- Timely medical insurance enrolment.
  - Improved visibility for HR and management.
  - Standardized confirmation management process.
  - Seamless integration with the 30-Day and 90-Day employee check-in framework.
- 

## 11. Conclusion

The solution delivers a fully automated and auditable employee confirmation and medical insurance enrolment process. By combining confirmation tracking, supervisor approvals, extension management, employee status controls, and insurance decision recording within a single platform, the organization benefits from a scalable, transparent, and efficient process while minimizing manual intervention.
